Joe Aquino, director of sustainability for Drax, explaining the composition of waste wood set to be turned into wood pellets at the U.K. company's Lavington mill in B.C.

Carrie

British Columbia

9/13/2022

Air quality throughout B.C. are at dangerously high levels. Stay safe by reducing outdoor activities, using air purifiers indoors, also stay hydrated by drinking plenty of water. Avoid travelling into areas where the smoke is heavy by using the Air Quality Indexes of B.C. app on their website. Protect children, babies, seniors and those with illnesses. This is all the more reason to not burn wood stoves, yard waste and agriculture debris when wild fires are over. We NEED CLEAN AIR during those times to recuperate from all the summer wild fire smoke we experience every spring, summer and fall. [Kevin Llewellyn](#) I wonder too? There are so many fires in B.C. right now, I read over 52 active fires. The one nearest me was a human caused fire. I get so angry at that because it's so preventable. If the government had kept the fire ban in place maybe this one might not have started. But people should have common sense not to start a fire in these conditions. I think a lot of our problems are brought on by brain dead people.

9/11/2022

Watch out "Elite". Who are the "Elite" anyway? Are you one if you make \$100,000 a year or \$1,000,000 a year? If you inherited a business and money, are you then "Elite". He has \$9 million dollars, is he an elite? It seems that some people are jealous of money and success and others are using that as a ploy to lead them toward hate for our government and business leaders. If they were to replace the word "Elite" with the word "Jews" they would see what kind of philosophy they are following. During the Second World War Hitler accused the Jews for upsetting the economy by manipulation. Does that sound familiar? It's what the "Elite" are accused of by this leader. Everyone would do better to stop fighting, start helping government programs work, support honest leaders and most of all, by loving their families and people.

[Darlene Deutch](#)

A Pied Piper peddling his dreams to radical groups. Some of his associates (The Proud Boys) (The Freedom Convoy) are on the Government of Canada's 77 known terrorist groups in Canada. "If you are not with him, you are against him" sounds very intimidating. Does that make you feel safe and included?

Corporate greed and negligence cost over 300 people to lose their lives on the Boeing 737Max 8 in two separate crashes within five months. The investigations were hindered, employees of Boeing intimidated, and lies were told until the victims families relentlessly pursued and obtains some justice and financial compensation. Predatory companies merged with Boeing and sucked it dry of its status, finances and most importantly its integrity to the public. The FAA colluded with the company until a congressional investigation was held and they were forced to do their job, ensuring the safety of the public who fly in the planes Boeing builds. The documentary is available on Amazon Prime TV, well worth the watch.

Predatory companies who buy or merge with businesses can suck them dry of finances and run at cost cutting levels. The onus is on the employees to work harder and faster to build planes, automobiles, and whatever and reduce costs to the company. While they skim the profits, knowing they are producing inferior products that are not safe for public use.

9/10/2022

Battleship Mountain wild fire in north east British Columbia has grown to over 17,000 hectares. Brave men and women are working to protect structures, homes and farms. The loss of wild life must be immense. This fire was started over two weeks ago by lightning, it apparently was not human caused. But, the one near Hope B.C. which is now threatening homes was human caused. As were over 325 other wild fires, starting in May until today. As much as 22.5% of this year's fires were human caused. Ban camp fires all year in Provincial Parks, save our eco-systems.

People with disabilities bear the brunt of community air pollution. Some people with MCS have no choice but to leave their homes, drive out of the wood smoke and sit in their cars overnight in the cold, so they can breathe clean air. Those with COPD have to block vents, use air purifiers and stay indoors when there are wood stoves burning near their homes. The examples of people with disabilities who are negatively affected by environmental pollution is endless. Time to consider others before burning anything.

Freedom fighters beware who you are following. Rebellion is not true Christianity or condoned in the Word of God. With the Conservative Leadership vote going on now be careful what you are voting for. The front runner Pierre Poilievre has campaigned on the theme "Freedom". Freedom from what? Vaccine restrictions, public health safety measures, taxes, government legislation, are not freedom issues. If they want to know what true freedom is, look to Russia or China where people have no rights under dictators. We are strong, true and free already in Canada. What would people think if the government had done nothing about the COVID problem at the beginning? Like the USA under Trump there would have been many more deaths, hospitalizations, and children losing their parents. This movie shows what can happen when people blindly mix religion and politics, people get hurt. There are currently 77 terrorist entities listed on the Government of Canada website with four more being added this year.

9/9/2022

Human caused wild fire near Hope B.C. has put residents of the area on high alert. They must be ready to leave their homes quickly, with only a few personal items of importance. The person who started this fire was probably doing so legally, since the fire bans was lifted only a few weeks ago. They probably never thought it would be them who would start a forest fire that would endanger fire fighters, air crew and residents. But it was, and I wonder if their wieners were worth all the risk of life and taxpayer dollars to control this fire. More than 22.5% or 325 of the 1500 wild fires were human caused this year alone. That does not include last year where over 40% of the millions of hectares burned were caused by human activity. The smoke, cost, environmental damages of the fire starters bad decision affects us all, and more need to be done to stop it

9/9/2022

Thank you for your service Queen Elizabeth 🙏 I loved you for your faith, loyalty, strength, integrity, humility, perseverance, kindness, love for people and beautiful Spirit. You are a wonderful example of what a godly woman should be. I know in my Spirit, that now you are with your beloved and other family members who love you. You are at peace and loved, in His glorious presence, so don't miss us. I say "Later! Until we meet one day in His glorious Kingdom". I will miss you, as I did Diana, but am glad you are both at rest, no more duties!

DW Who owns the Water documentary is a very interesting study of the need for fresh water in many countries. The huge corporations like Dasani bottled water company, Coke Cola and Breweries, many in Pakistan are now commissioned to limit water usage. Pakistani farmers are committing suicide in record numbers because they have no water to make a living. What happens when the world runs out of water? Our river is on level three drought status, resulting in two day a week watering restrictions. The fish are in distress because of last years floods and the low water levels. As we go about business as usual, remember that every time you burn something, whether it be in a wood stove, backyard fire pit, camp fire or debris pile you are adding to global greenhouse gas emissions and the results of it.

ABC 4 TV contacted UPHE this morning and asked us to write a message on the pollution we are experiencing from the wildfires. Below is what we sent them. "The wildfire air pollution we all see, smell, and breathe, is directly related to the climate crisis and the record breaking heat and drought that has plagued the Western United States for most of this September 7 at 6:01 PM September 7, 2020 9/13/22, 10:39 AM (20+) Darlene Deutch | Facebook

<https://www.facebook.com/darlene.deutch> 2/2 summer, and in fact for many years. Unfortunately, summer wildfires are becoming increasingly the norm, and summer air quality may become even worse than our notorious winter inversions. "Pollution from wildfires may look and feel much like our winter inversion pollution, and the health effects are certainly similar. But it may be even worse, because there is a higher concentration of damaging chemicals in wood smoke, and many of the particles are smaller, allowing them to be more easily inhaled, picked up by the blood stream, and delivered throughout the body, causing biologic stress wherever they end up. And that can be in the heart, brain, kidneys and even the placenta of a pregnant mother. "Virtually the entire long list of diseases we know are caused by smoking cigarettes, are either caused or exacerbated by air pollution, including: lung diseases of virtually every type, like chronic bronchitis, asthma, and pneumonia; heart diseases, including abnormal rhythms, and heart failure; blood vessel and clotting disorders that cause heart attacks and strokes; brain disorders, including acute and chronic memory and cognition impairment, Alzheimer's, and other neurologic disorders like Parkinson's and multiple sclerosis; pregnancy complications like premature birth, hypertension, and still births; chromosomal damage and impaired fetal development, like birth defects; cancer, including lung cancer, breast cancer, and childhood leukemia; decreased kidney function, endocrine disorders like type II diabetes, and arthritis. "The biologic and disease consequences can persist long after an air pollution event is over. For example, the pollution particles we are inhaling now, can still be embedded in any of our critical organs months later, and some may never leave. "The average person's life expectancy is shortened by their exposure to air pollution, even if they have no overt symptoms from it, or none of the diseases known to be caused by it. Just like there is no safe number of cigarettes a person can smoke, there is no safe level of air pollution a person can breathe. Hundreds of studies have shown that even the low levels of pollution present on a "good" air quality day, are still causing silent damage to our health and accelerating the aging process. "In the era of a pandemic we have even more reason to be concerned. Several studies have shown that air pollution significantly increases the risk of a poor or fatal outcome from the coronavirus. "Utah Physicians for a Healthy Environment advise that people take as many precautions as possible to protect themselves from this wildfire pollution. Stay indoors and use air purifiers to improve indoor air quality. For your own sake and that of your neighbors, don't barbecue. Not only does barbecuing increase the pollution you inhale, it significantly increases toxic chemicals that you absorb through your skin and clothes. Don't exercise in pollution levels this high. If possible, don't add to the pollution by driving your car. Eat healthy, with plenty of anti-oxidant rich foods. "Long term, look at how we make public policy, and support political leaders who take our air pollution problem and the climate crisis seriously, and want to make them better."

DP of BC 9/6/2022

These were British Columbia's Fraser (left) and Similkameen (right) Valleys today. They actually don't do it justice because it was much worse than they show (I had to wear a mask in the car because the smoke was so thick, and at one point we had almost zero visibility).

If we don't get climate change under control and quickly, then this will become the norm.

This is also a larger version of what happens to your neighbours when you burn wood, so please don't.

9/6/2022 Carrie

All smoke is deadly to humans and animals. "The more we find out about smoke, the more we find out how toxic it is for humans, says Mike Flannigan, a research chair for Predictive Services, Emergency Management and Fire Science. The number of people that die prematurely due to wildfire smoke in Canada is about 2,500 people (per year) so this is not a trivial thing at all." Wood smoke from any source in our communities is a serious health risk.

9/3/2022

Everyone who burns anything is contributing to this global crisis. Warming temperatures in the Arctic will cause melting tundra which will release methane gas and CO2 far more than is already in the atmosphere. Can we do anything, if we all work together at it maybe we can limit temperatures but they will still go up. We could work to mitigate and adapt to changes in climate but we should all be doing that now. The panic will come when the water resources, agriculture and clean air are gone forever.

Comment: Norway likes to pose as a “green” country but makes most of its money peddling fossil fuels. The Arctic is warming four times faster than the rest of the world. More pressure must be put on Norway and other countries to be truly a green economy and stop peddling BS about clean energy while still burning coal or diesel.

9/2/2022

How can someone certify wood smoke, where do they draw the line between an acceptable level of air pollution. What happens when many certified wood stoves are burning together in a Winter weather inversion. Day after day and night after night, building up in the air, lingering for weeks and months. With our Summers filled with smoke, Winter could be a chance to breathe cleaner air in our communities. Ban wood burning stoves.

CS on 9/2/2022

[Clive Stott](#)

Well they 'certify' wood heaters and you know how much of a failure that has turned out to be.

Perhaps the certifiers need to be certified?

Carrie on 9/2/2022

After being told I am too pessimistic, I came upon this article in The Conservation. Which made me feel justified in my attitude toward climate change, that things will not get better soon soon. Because I felt it was imperative to show happiness all the time, to be optimistic no matter what, to ignore reality and only talk about good things. Talking about the negative effects of climate change and speaking out about air pollution made me look pessimistic. “If we find ourselves unable to live up to the “happiness imperative” we can feel inadequate and like failures. Pessimism can offer philosophical tools to better understand our place within existence. It can help us come to terms with the idea that refusing to relentlessly pursue happiness is perhaps the most reasonable attitude.” Critical thinking leads to observation, experience, reflection, reasoning, or communication as a guide to belief and action. All necessary for the changes we need to make to mitigate climate change and it’s effects on humanity.

KL on 9/2/2022

The polluters get a kick out of being positive backing up their lies and bullshit with words like SUSTAINABLE and ECOFREINDLY ,blah ,blah. GREENWASHING!

How can you be positive with the truth about air pollution and the affects it has on us ,when DEFRA...

See more

KL on 9/2/2022 right, hard not to be pessimistic when they are ignoring facts, science, people, the environment. Any hope of them changing is fading fast. The good folks are always living with the effects of the bad people who don’t care. So, searching for happiness is unrealistic in a world where bad people cause so much trouble. Just keeping the peace and making little changes where one can keeps me on track. If enough people do that then big changes can out pace the damage done by bad people is my hope. Fingers crossed, of course.

This is outdated but give good information on smoke advisory and air quality in your area. Don’t add to smoke by lighting camp fires or burning things.

9/1/2022

Campfire bans have been lifted. The forests are still very dry and easily ignited. We do not need smoke from campfires in our parks, causing acidification of lake waters, algae blooms and dying fish. Say no to campfires in parks.

yes, to even take a chance of starting another forest fire and risking our workers lives is reckless. There is no NEED for a camp fire when other cooking is available.

JL on 9/1/2022 commenting on Carrie’s photos of clouds

clouds look so beautiful, but I see that they are likely a result of smoke, so unfortunate...D Thanks for photos smoke makes light pollution even more obvious, yes.

Wood fires are meant for caves, get on with it and get clean energy heating. Heat pumps keep you warm in Winter and cool in Summer. There are excellent rebate programs in place for clean energy in B.C.

Wood stove burning, backyard debris burning, agricultural burning, fire pits, campfires, human caused wild fires, industrial emissions, vehicle emissions all contribute to global warming and human suffering. Maybe the burner isn’t suffering much now, but they are sure adding to suffering for others. Wood smoke air pollution causes unnecessary air pollution in our communities during times when we could have cleaner air. And critically affects the environment we all depend on to live a healthy life.

Campaigners have accused the biomass industry of making “false” and “misleading” claims to European members of parliament ahead of a crunch vote to tighten protections for precious forests.

<https://www.euractiv.com/section/biomass/news/eu-parliament-groups-rally-behind-plans-to-end-biomass-subsidies/>

EU Parliament groups rally behind plans to end biomass subsidies

The amendment also puts forward a definition for what constitutes 'primary biomass' – or wood that cannot be counted towards the EU's renewable energy targets.

It does not, however include “woody biomass obtained from sustainable wildfire prevention measures in high-risk fire-prone areas, woody biomass obtained from road safety measures, and woody biomass extracted from forests affected by natural disasters, active pests or diseases to prevent their spread” – all kinds of wood that would be acceptable under the EU's renewable energy targets.
