

Episode 56SI March 27, 2024. Can we afford to be passive about particulate air pollution? A German village.

RAWSEP View: 1a)Two actions you could take to move forward toward cleaner air in Wisconsin. 1)go to <https://apps.psc.wi.gov/APPS/docketCalendar/Content/Subscribe.aspx> and subscribe to two dockets on the Public Service Commission (PSC) of Wisconsin calendar 9717-FG-2023 and 9716-FG-2023. And 2)File a Comment Online on these Docket items at <https://apps.psc.wi.gov/APPS/dockets/publicComment.aspx> by scrolling down to Inflation Reduction Act - High-Efficiency Electric Home Rebate Program [File a comment](#) and Inflation Reduction Act - HOMES Rebate Program [File a comment](#) 1b) Can we afford to be passive about particulate air pollution? In our household, a favorite Youtube video is for the song “Watching and Waiting” by the Moody Blues <https://www.youtube.com/watch?v=eYenQ5C77nk> Illustrated with a picture of a lovely tree in the countryside, the lyrics include “Watching and waiting, for someone to understand me, I hope it won't be very long.” It is a lovely sentiment to be patient and hope for the best, but the lyrics also include “there's lot of room for doing The things you've always been denied, So look and gather all you want to, There's no one here to stop you trying.” Sounds like a (languid) call to action to me, to stop the particulate pollution from indoor residential wood burning. This is what RAWSEP’s editor tried to do in a comment to the Public Service Commission of Wisconsin yesterday 3/26/2024, see Episode 56SH, enumerating the reasons why no indoor residential wood burning appliance should be considered for use as a backup to the clean energy home heating offered by Heat Pumps that now work down to 40 degrees below zero. The State of Wisconsin has tentatively scheduled rollout of their up to \$8,000 rebates for Heat Pumps, based on a sliding income scale, by September 2024. Producing wood pellets so that they can be burned in burning of wood pellets in biomass incinerators is even more polluting than burning coal. 11)Headlines. Now 2nd on Table of Contents. 2)Germany. RAWSEP will probably start monitoring PurpleAir PM2.5 in Germany on a regular basis. RAWSEP View: The key takeaway from this article is that in Melpitz, a village in Saxony, Germany “The air pollution in the village was found to be twice as high as in the nearby fields, with the worst air quality observed during weekends when smoke from stoves added to the pollution”. 2a)Synopsis of original Guardian article. [Wood Burning in Small Villages Causes Significant Particle Pollution - Head Topics](#) Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. A recent investigation has found that wood burning in small villages can be a significant source of particle pollution. Wood Burning in Small Villages Causes Significant Particle Pollution 3/22/2024. The study was conducted in Melpitz, a village in Saxony, where most houses are heated by oil or wood central heating. The air pollution in the village was found to be twice as high as in the nearby fields, with the worst air quality observed during weekends when smoke from stoves added to the pollution. The risk of particle pollution was estimated to be half as high as the risk of death in a traffic accident for the villagers. The study also revealed that the cancer risk from wood and coal smoke was similar to that in major European cities. The researchers believe that this situation is likely to be replicated in many rural areas, including the UK. Environment News. Wood Burning, Small Villages, Particle Pollution, Air Quality, Melpitz, Saxony, Rural Areas, UK 2b) original Guardian Article. Germany. [How one German village exemplifies the cancer risk from wood burning - The Guardian](#) Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. The air was worst at the weekends when smoke from stoves added to the pollution mixture. For the villagers, the risk from the extra particle pollution. Residential heating with wood or coal can lead to significant air pollution, even in rural communities, researchers say. 3)United Kingdom, London. [Air quality battle just warming up - Workers' Liberty](#) PM (particular matter) 2.5 tended to report more instances of sickness absence. PM 2.5 is matter that is less than 2.5 micrometres in diameter. Air quality battle just warming up. Posted in [Tubeworker's blog](#) 3/24/2024. Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization.

Research, published in March 2024 and led by Imperial College London, has found that London Underground staff who work in areas with higher concentrations of PM (particulate matter) 2.5 tended to report more instances of sickness absence. PM 2.5 is matter that is less than 2.5 micrometres in diameter (considered “fine”) and made up from a number of chemical compounds and materials – some of which are toxic. The fact PM 2.5 is so fine means it can enter the body and bloodstream and be transported to our vital organs, leading to health problems. It is particularly dangerous for people who already have underlying health issues. Last year, unions health and safety reps completed a number of air quality investigations across the network; some of the results were startling. The Imperial College research does not come as a surprise. We need to keep raising the air quality issue for both the health and safety of the staff who keep London running, but also for the travelling public. The Imperial College research was the largest ever research project measuring potential health issues caused by airborne dust on London Underground. Although it did not establish a direct causal link between PM 2.5 exposure and sickness, there was a correlation between PM 2.5 levels and sickness levels. The work of local and second-stage (Functional Council and Safety Council) reps on this issue is commendable. That work needs to develop and continue. Ultimately we must demand that the employer ensures proper ventilation systems to minimise risk. The battle is only just warming up.

4)United Kingdom, London. [CITY WHISPERS: Tactless Drax burned by its ill-timed report on the International Day of Forests](#) MSN Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. Though burning off-cuts of trees already chopped down is backed by Government, there are many who call for it to stop. Up in smoke: Drax said. Timing is, as they say, everything. So one has to wonder if Drax made the right call in releasing its annual report on the International Day of Forests. In it, the power producer, which burns wood (known as 'biomass') at its Yorkshire plant, said it sourced 8 million tons of wood from around the world and burned 6 million in 2023. 5)Scotland. [Wood burning stoves causing pollution must be better regulated by SNP ministers, charity says](#) MSN 5 Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. emissions from wood burning as a fuel between 2010 and 2021. PM2.5 consists of fine particles of less than 2.5 micrometres in diameter that can. Asthma and Lung UK Scotland said many people think of wood burners as green alternatives to coal and gas without realising the health risks from. 6)Europe. [Environment statistics at regional level - European Commission](#) European Union Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. Air pollution is a major cause of premature death and disease in the EU, with fine particulate matter (PM2.5) deemed to have the most severe impacts. 7)United Kingdom. Hertfordshire. [New campaign uncovers shocking downside of a common home heating practice](#) The Cool Down. Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. This winter, the Hertfordshire County Council funded a campaign to let residents know of the dangers of wood burning for heat. 8)Chile. Although there is no exhaustive registry, it is calculated that. 9)RAWSEP View: a cautionary, polluting tale from Connecticut. [Re-Energize Connecticut - Yankee Institute](#) Yet these jobs have materialized instead in Maine, New York, and Quebec, where wood-burning biomass and hydro- power facilities meet most of the. 10)Colorado, Vail. [Letters to the Editor: Wood pellet project, Thanks to Vail Epic Promise | SierraSun.com](#) Sierra Sun. Producing wood pellets so that they can be burned in burning of wood pellets in biomass incinerators is even more polluting than burning coal. Dear Editor: (March 24, 2024) Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. (A previous article in this newspaper brings attention to) the ongoing attempt by the wood pellet industry to expand into California, “Golden State Natural Resources’ wood pellet project and the debate over California’s Forests”, March 8, 2024. Producing wood pellets so that they can be burned in biomass incinerators to generate electricity is, quite simply, terrible for the planet and is something we should all be alarmed about. The pellet making process releases carbon monoxide, nitrogenous gases, and other hazardous air pollutants, as well as formaldehyde and other volatile organic compounds and burning of wood pellets in biomass incinerators is even more polluting than burning coal. Getting the pellets to the incinerators, most of which are in foreign countries, requires shipping them in fossil fuel-

powered ships, an additional source of carbon emissions. So too is the loss of forest carbon to the atmosphere during the extraction of the wood required to create the pellets. At this critical juncture in time for our planet when our lives and are planet are being so dramatically affected by climate change, we urgently need to keep carbon in the ground, not log it and then release it into the atmosphere via biomass incinerator smokestacks. The substitution of coal with wood pellets is the exact opposite of a climate solution and the narrative that it a good alternative to coal is a classic case of greenwashing. It is not cleaner than coal and, in that it takes decades to recapture the carbon lost by the burning of trees, it is not truly renewable. Truly renewable, truly clean energy resources like wind and solar should be expanded to meet our energy needs, not the wood pellet/biomass incineration industry Headlines. World. [30 Countries With the Worst Air Pollution - Yahoo Finance](#) According to the 2023 air quality report, only 10 out of 134 countries and regions achieved the WHO annual PM 2.5 standard of 5 µg/m3.
