WebMD. particulate matter, or PM 2.5, A 2023 study that analyzed hospital admissions for psychiatric disorders in eight US. 16)PM2.5 and the money-making fad of smoked cheese. RAWSEP View: Smoked cheese is a fad, a folly, a foolish fashion with, luckily, no long-term tradition, like those alliteratively f similar pollutant burning solid fossil fuels like coal. However, wood burning emits 2.8 times the PM2.5 particulates as the fossil fuel coal burning. Wood burning emits 2.8 times the CO₂, which along with PM2.5 hastens climate change. Wood burning emits 90% PM2.5, particulate matter of 2.5 micrometer size, the perfect size to infiltrate the human lung, setting off a cascade of human health problems and early deaths. Some wood smoke flavorings are now banned in the European Union because of the method of producing smoked cheese by burning wood so that wood particulates enter the air. Some of the wood smoke particulates are breathed in, and some of the wood particulates become ashy or dirty additives to the cheese. A kitchen mishap of dropping the cheese on the floor into dirt and dust can be obscured by the airborne wood smoke particulates which are indistinguishable from dirt and dust. Smoked Cheese is only a dirty, cancer contributing, marketing ploy of the wood burning industry to make a profit. Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization. Why smoked cheese is trending and (most importantly to the wood burning industry) how to sell it. Speciality Food Magazine. Smoke flavor by placing it in an enclosed space with the smoke from smoldering wood chippings or pellets (usually oak, applewood, hickory or beech).
