The fatal attraction of domestic wood burning. Air Quality News. Australian pensioner David Bolton spent several years battling the bureaucracy over wood heater pollution in his Canberra neighborhood before his death. **RAWSEP View.** ACT stands for The Australian Capital Territory. **Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization.** Australian pensioner, David Bolton, spent several years battling the bureaucracy over wood heater pollution in his Canberra neighborhood before he died last year. David, who suffered from a serious lung condition, believed excessive smoke from a nearby wood heater was affecting his health and claimed local authorities took little concrete action against the polluting wood heater despite his lodging numerous complaints over a long period. David's lung condition meant he was imprisoned in his own home when a neighbor fired up the wood heater. But even this wasn't enough. The wood heater smoke was so heavy and concentrated at times that it seeped into his house even with all the doors and windows shut. David struggled to breathe. He was admitted to hospital on several occasions. Despite speaking to the neighbor and a visit from a government inspector, the toxic smoke continued. In the end, he gave up and decided to sell his home of many years. Before he and his family could escape to a cleaner neighborhood, 66-year-old David was rushed to hospital where he died. While there was no direct evidence that smoke from the neighboring wood heater was responsible for his death, his son,

Matthew, believes the stress of struggling to live and deal with neighborhood wood heater pollution worsened his father's condition. It is expected the wood heating industry will attempt to make the phasing out of wood heaters in suburban Canberra an issue for ACT voters when they go to the polls in local elections this October. In response to a report, the ACT Minister for the Environment announced wood heaters will be phased out in suburban Canberra by 2045. This Environment Minister has indicated the ACT Government is standing firm on its decision. Meanwhile, Matthew Bolton has welcomed the phasing out of wood heaters in Canberra's neighborhoods. He said his father was desperate to see change and while it is good news, it has come too late for him. 18 United Kingdom Hull. Ideal Heating awarded Government funding to accelerate heat pump production. NEWS. HULL IS THIS.
