

Episode 57BB December 13, 2024. Revoking Approval of the Polio Vaccine endangers national security.

In Episode 57BB 0 Introduction. Clean Air is necessary for National Security. 1 Revoking Approval of the Polio Vaccine endangers national security. 2 Pardons for Trump's enemies list safeguards national security. 3 Other actions by the current president would safeguard national security. 4 Safeguarding national security allows us the space and time to tackle real problems in the United States. 5 Solar power clears a common hurdle in Oregon. Main Content. 0 Introduction. Clean Air is necessary for National Security. **RAWSEP View:** RAWSEP first began describing air pollution from indoor residential wood burners as a threat to national security when asked for a reason for submitting information to the Defense Department on the need for regulation of indoor residential wood burning and shutting down indoor residential wood burning one wood burning stove at a time if necessary. RAWSEP described the wood burning June 2023 wildfire smoke incursion into the United States which in the state of New York led to public health authorities recommending New York residents to stay inside their sealed homes with multiple air purifiers running. In December 2024 during a wildfire wood burning smoke incursion into Malibu California at Pepperdine University students stayed overnight inside a library. The school tapes doors shut and uses air filters for protection from air pollution. Staying inside sealed homes with multiple air purifiers running is how members of Residents Against Wood Smoke Emission Particulates have lived their lives as near neighbors of indoor residential wood burners whose wood smoke enters the near neighbors yards and sickens the near neighbors of indoor residential wood burners. The first threat to national security named in this episode is that wood burning whether industrially residentially or from wildfires causes illness and early deaths which makes the United States population vulnerable because the population health is compromised by unnecessary wood burning. Just don't burn wood to begin with when there are alternatives in 2024 of wind solar and geothermal industrially, and the alternative residentially of Heat Pumps that work down to 40 degrees below zero with Heat Pump Rebates of up to \$8,000 based on a sliding income scale available in 2024. 1A **RAWSEP View:** Revoking Approval of the Polio Vaccine endangers national security. Six Childhood Scourges We've Forgotten About, Thanks to Vaccines. The New York Times. Most Americans, including doctors, have no memory of the devastating diseases that routinely threatened children until the 1960s. Measles, which was eliminated in the U.S. in 2000 but has seen a resurgence, can be dangerous for children under 5. There have been 16 measles outbreaks in 2024, compared with four outbreaks in 2023. **Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization.** December 13, 2024. Some of President-elect Donald J. Trump's picks for the government's top health posts have expressed skepticism about the safety of childhood vaccines. It's a sentiment shared by a growing number of parents, who are choosing to skip recommended shots for their children. But while everyone seems to be talking about the potential side effects of vaccines, few are discussing the diseases they prevent. It has been half a century or more since many of the inoculations became routine in the United States, and the experience of having these illnesses has been largely erased from public memory. Questions today about the risk-benefit ratio of vaccines might just be a product of the vaccines' own success. RAWSEP View. Here is a list of six once-common illnesses that vaccines have contained for decades. 1 Measles. 2 Diphtheria. **RAWSEP** was interested to learn that The Greek word diphthera means leather which is a fitting reference for a bacterial infection that creates a thick, gray membrane over the throat and tonsils, suffocating its victims. The infection is now preventable in young children through multiple DTaP vaccine doses, and preteens and adults get boosters called Tdap. Thanks

to vaccinations, cases in the United States have gone from more than 100,000 per year in the 1920s to on average less than one. 3 Tetanus. 4 Mumps. 5 Rubella. 6 Polio. In the United States, vaccines drove paralytic polio cases down from more than 21,000 in 1952 to just one in 1993. But in 2022, the C.D.C. confirmed a new case in Rockland County, N.Y., which had low vaccination coverage. The agency called the single case a public health emergency.

1B Robert F. Kennedy Junior Lawyer Has Asked the F.D.A. to Revoke Approval of the Polio Vaccine. Aaron Siri, who specializes in vaccine lawsuits, has been at Robert F. Kennedy Jr.'s side reviewing candidates for top jobs at the Department of Health and Human Services.

**RAWSEP View.** Anti science actions would not prevent deaths but instead contribute to more unnecessary death because vaccines were not used. Perhaps Kennedy is also only a useful idiot like Sarah Isgur in article topic 2 set up to divert attention from the real problems a future Trump administration might face such as another pandemic which might require another vaccine. Article Topic 1B **Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization.** The New York Times. December 13, 2024. The lawyer helping Robert F. Kennedy Jr. pick federal health officials for the incoming Trump administration has petitioned the government to revoke its approval of the polio vaccine, which for decades has protected millions of people from a virus that can cause paralysis or death. That campaign is just one front in the war that the lawyer, Aaron Siri, is waging against vaccines of all kinds. Mr. Siri has also filed a petition seeking to pause the distribution of 13 other vaccines; challenged, and in some cases quashed, Covid vaccine mandates around the country; sued federal agencies for the disclosure of records related to vaccine approvals; and subjected prominent vaccine scientists to grueling videotaped depositions. This week, on behalf of ICAN, he sent an "official demand" letter to Xavier Becerra, the current health secretary, instructing the health agency and all of its divisions, including the C.D.C. and F.D.A., to "preserve all documents." It ended with a warning: "Note that we will contact the Department of Justice and the Inspector General if there is any evidence that any records are destroyed, deleted, modified in any manner before January 21, 2025." Article Topic 2 **RAWSEP View.** Pardons for Trump's enemies list safeguards national security. Sarah Isgur wrote an article published in the New York Times on December 13, 2024 titled I Don't Want a Pardon From Biden. None of Us Should. **Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization.** RAWSEP is not going to excerpt much from Isgur article because the point RAWSEP is trying to make here is that Sarah Isgur is or was a Republican until 2018. Sarah Isgur is a now 42 year old woman who was a first Trump administration spokesperson at the United States Department of Justice. In 2024, Isgur defended Supreme Court justices' reluctance to adopt an ethics code, saying They are already so isolated. I don't know that people fully appreciate what the life of a Supreme Court justice is. RAWSEP does not believe from evidence from a Wikipedia article that Sarah Isgur is or was a whistleblower about the Trump Administration. According to Sarah Isgur's December 13, 2024 article she has no idea why she is on Mr. Patel's list of Trump's enemies lined up for prosecution. Sarah Isgur says she did work at the Justice Department during the investigation into the Trump team's connections with Russia. **In RAWSEP's view** Sarah Isgur is a sort of useful idiot perhaps put on the list so she could have a reason to tell the New York Times that she wants a court case against her to proceed for no apparent reason. Multiple expensive lawsuits against Sarah Isgur and also people who did take a stand against Donald Trump for moral legal and national security reasons seems to be what Mr. Patel wants. **RAWSEP View.** There is no us of other people on Patel's list and Sarah Isgur. **RAWSEP View** is that Biden should

and in advance and retroactively to all the people on Patel's list, but possibly excepting Sarah Isgur and let Sarah Isgur have her way and satisfy Mr. Patel in Sarah Isgur's case. Readers may well wonder who the people are on Mr. Patel's list. Trump promised to get revenge. Here are his targets according to a November 1, 2024 Politico article. **Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization.** Liz Cheney. Jack Smith. Mark Milley. President Joe Biden. Vice President Kamala Harris. Former President Barack Obama. Former Secretary of State Hillary Clinton. Former Speaker Nancy Pelosi. New York Attorney General Letitia James. Manhattan Justice Arthur Engoron. Former Rep. Liz Cheney. Special counsel Jack Smith. Manhattan District Attorney Alvin Bragg. Former Chair of the Joint Chiefs of Staff Mark Milley. Former FBI Director James Comey. Hunter Biden and the rest of the Biden family. Former FBI special agent Peter Strzok. Former FBI attorney Lisa Page. Rep. Adam Schiff. Facebook founder Mark Zuckerberg. Former Manhattan Assistant District Attorney Mark Pomerantz. Former Trump attorney Michael Cohen. U.S. Capitol Police Lt. Michael Byrd. Rep. Jamaal Bowman. 51 intelligence professionals who signed letter about Hunter Biden laptop. Members of the Jan. 6 select committee. Unspecified people engaged in election fraud. POLITICO reporters, editors and publisher. On December 13 Sarah Isgur wrote that also on the list are Bill Barr, who served as one of Mr. Trump's attorneys general; John Bolton, who served as a national security adviser; and Pat Cipollone, his last White House counsel. **RAWSEP View** is that these last 3 Republicans are also useful idiot names added to the list in Sarah Isgur's imagination to imply that Trump will not follow through on prosecution of names on any list because the last list of 3 loyalists to Trump and her name do not make sense for prosecution in a Trump universe. 3 **RAWSEP View.** Other actions by the current president would safeguard national security. The Biden Administration could take other steps to protect national security before January 20, 2024. 4 **RAWSEP View.** Safeguarding national security allows us the space and time to tackle real problems in the United States. Article Topic 5 Oregon. A major solar project clears a very common hurdle. **RAWSEP View.** Preserving farmland may be sacrificed in order to develop this clean energy source of solar. Solar industrial power is clean energy that could replace industrial wood burning. Solar panels whether industrial or homeowner owned connected to the electric grid powering Heat Pumps that work down to 40 degrees below zero and lower monthly electricity bills immediately could replace indoor residential wood burning for home heating. From the article. **Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates, a 501c3 nonprofit organization.** The problem: One of the biggest challenges that the U.S. solar industry faces isn't really about technology. It's about the time it takes to get projects approved and connected to the grid once built. the government's goal of having a net-zero electric grid by 2035, which is going to require significantly boosting the solar footprint in the U.S. The fix: Oregon gave its final approval last month to build a 1,200-megawatt solar facility in the eastern part of the state that could generate enough electricity to power tens of thousands of homes. It would be the biggest proposed solar and electricity-storage project in the country. Getting the project approved wasn't easy. Pine Gate was granted an important exception to Oregon land-use goals that are partly designed to preserve quality farmland. As part of its project, Pine Gate said it plans to pay up to about \$11 million to help the local agriculture industry. What's next: Pine Gate said it planned to start construction of the project in 2026. Solar power last year accounted for roughly 3.9 percent of utility-scale electricity generation in the United States. The U.S. Energy Information Administration said it expected solar power generation to increase 75 percent in 2025 over 2023.
