

Keep it Simple Scientist KISS anti Rube Goldberg Machine solutions competition. For this KISS competition sophomoric but savvy scientists who had access only to copyright free pictures available on the internet were challenged to create simple dioramas showing the wood burning fires inside cavemen caves symbolizing our increasingly shrinking world as climate changes gains a foothold and as wood burners increasingly crowd neighbors with the toxic emissions from wood burning of CO2 and PM2.5, from indoor residential wood burning increasingly likely to sicken and cause the early deaths of near neighbors. This KISS competition looking for real world solutions to the air pollution caused by indoor residential wood burning may be thought of as the antidote to and the opposite of frighteningly ineffective but lucrative for competitors RUBE GOLDBERG MACHINE competitions of subsidized research on carbon capture of indoor residential wood burning emissions of CO2 and PM2.5, So to sum up, KISS competitors were challenged to first illustrate the air pollution from indoor residential wood burning and second illustrate the solution to the problem of air pollution from indoor residential wood burning and in the process sweep aside the false Rube Goldberg like solutions brought forth with the help of government subsidies for these Carbon Capture false solutions.

HEAT PUMPS are The KISS WINNER! Keep it simple Scientists!

Smart Grid

the false Rube Goldberg like solution 1 brought forth with the help of government subsidies for these false solutions. **THE FALSE and expensive to the taxpayer SOLUTION 1 of CARBON CAPTURE LOSES the KISS Competition AGAIN!**

We have spared you by simplifying the convoluted and ultimately failed method of Carbon Capture in this simple illustration below! You are welcome!

Carbon Capture does not work. Carbon Capture lines the pockets of the wood burning industry through government subsidies and allows the wood burning industry to continue their air polluting practice of burning wood for energy instead of using the truly clean energy sources of wind solar and geothermal. Government subsidies for wind solar and geothermal should increase instead. Even the fossil fuel energy alternatives are cleaner than wood burning. Wood burning emits 90 percent PM2.5 particulate matter of 2.5 micrometer size the perfect size to infiltrate the human lung setting off a cascade of human health problems and early deaths. Wood burning emits 2.8 times the CO2 and PM2.5 as the fossil fuel coal burning. Wood burning emits 450 times the PM2.5 as the fossil fuel natural gas burning. These statistics from testing the cleanest burning indoor residential wood burning stove in the United Kingdom the Ecodesign wood stove.
