

Webisode 57DHYAEC December 8 2025 Trust Vaccine Safety and Effectiveness during our holidays!

Larry the Litigator here in the RAWSEP studio with all air purifiers running and the entire RAWSEP Audience wearing the stylish ski goggles in solidarity with Residents Against Wood Smoke Emission Particulates a 501C3 nonprofit organization in solidarity with the personal protective equipment that protects the eyes of near neighbors from the PM 2 point 5 emissions from indoor residential wood burners in their yards which also infiltrates their homes in their own hyper localized neighborhoods!

RAWSEP Audience Hey Larry! Should we Trust Vaccine Safety and Effectiveness during our holidays?

Larry the Litigator Safety and Effectiveness of Vaccines is guaranteed by medical authorities such as an Academy of Pediatricians! Here is one spokesperson from an Academy of Pediatricians Doctor Pollyanna!

Doctor Pollyanna I always look on the bright side! The American Academy of Pediatrics put out on December 5 2025 a very clear directive that we are recommending Hepatitis B birth dose for all newborns!

Larry the Litigator There was a lawyer a notorious lawyer against vaccines who made a long presentation before the Cary G committee arguing today December 5 2025 that pharmaceutical companies because Congress has given them liability protections do not test the vaccines and that federal regulators are overlooking any evidence of harm What does it say to you that we have someone like that testifying before what is supposed to be our preeminent vaccine panel?

Doctor Pollyanna Well it tells you that we no longer have that vaccine panel being preeminent I think they are not to be trusted I think the CDC is not to be trusted I think Cary G has now basically elevated activism against vaccines into United States public policy I think the good news is the medical community the scientific community now ignores the ACIP and ignores the CDC This Academy of Pediatrics put out today a very clear directive that we are recommending this birth dose for everybody And what happened here in this ACIP committee today is why That is why we physicians are ignoring what this group is doing And hopefully everybody will ignore them because they are worth ignoring!

Larry the Litigator All members of the vaccine advisory panel of the federal government were appointed by Health Secretary Cary G and today December 5 2025 those members voted 8 to 3 to drop the recommendation that all babies get vaccinated for hepatitis B at birth Instead the panel recommended that parents consult with doctors This may confuse and delay parents asking for their newborns to get the lifesaving vaccine and may result in some newborns not getting the Hepatitis B vaccine! For decades in the United States the hepatitis B vaccine has been recommended for all newborns Hepatitis B is a serious virus It affects the liver and infection can lead to major health problems including cirrhosis and liver cancer Newborns are especially vulnerable to this blood borne virus and a baby exposed at birth has a 90 percent chance of a lifelong infection The vaccine has been shown to be highly effective in preventing infection if given within 24 hours of birth So Doctor Pollyanna You were invited to testify before this ACIP panel but you said no! Why did you decline to speak before this Cary G committee? You are a longtime supporter of this 1991 previous recommendation that all babies born get hepatitis B vaccine! Why?

Doctor Pollyanna In 1991 the recommendation was to have a birth dose of Hepatitis B vaccine for all babies Those would be babies whose mothers had hepatitis B infection and also those babies whose mothers did not have hepatitis B infection because at the time thirty thousand children less than 10 years of age had hepatitis B

Half of them got Hepatitis B from their mothers. The other half did not. The other half got it from relatively casual contact with someone who had chronic hepatitis B. And there were millions of people in this country then and millions of people in this country now who have chronic hepatitis B. And this can be transmitted fairly casually. I mean if you live in that home or if you share any sort of common things like toothbrushes or washcloths or towels or nail clippers you can get hepatitis B. Fifteen thousand children got hepatitis B not from their mothers. And with that 1991 recommendation we virtually eliminated this disease in children less than 10 years of age. But this Advisory Committee for Immunization Practices ACIP the Cary G committee does not recognize that. And so they are now trying to put children in the way of harm again!

Larry the Litigator: Is there any demonstrable evidence that these vaccines cause harm?

Doctor Pollyanna: No. And the study that Cary G references does not show that either. But when do we start to get to the point where we do not believe Cary G? When he claimed that the measles mumps rubella vaccine caused autism he made a movie called Vaxxed 2 thousand Bonkers Ideas! He was the executive producer claiming MMR vaccine causes autism. Then when the fear was that thimerosal this ethyl mercury containing preservative vaccines caused autism he wrote a book Thimerosal Let the Bonkers Cary G Science Speak! And thimerosal study after study showed that did not cause autism. Then in April 2025 he said I am going to have a major announcement. Autism is preventable. We are going to have a major announcement in September. And in September the president stepped up to the microphone and said Tylenol causes autism which is not true either. There are two excellent studies in Sweden and Japan that show that is not true. When does Cary G start to lose credibility?

Larry the Litigator: There was another representative from the FDA today December 5, 2025 who put up a lot of evidence arguing that the United States compared to European nations other developed nations is an outlier when it comes to vaccinating children. Is there any truth to that?

Doctor Pollyanna: We in the United States believe in giving vaccines to children if it prevents a disease that causes children to suffer or be hospitalized or die. We in the United States are willing to spend the money to do that. Not all developed world nations are willing to do that. So we in the United States care about our children and want to make sure that they do not suffer. For example some European countries choose not to give the chicken pox vaccine. But in this country chicken pox caused 10 thousand hospitalizations a year. It caused 75 to 100 children primarily to die every year. So if you can prevent it prevent it! And that is where we stand!

Larry the Litigator: There was an interview with Cary G released last week. I do not have a subscription so I only know how this interview in a certain journal was discussed in the media. The news that leaked out is that Cary G thinks of himself as a modern day King Arthur and is a skeptic of science itself!

RAWSEP Audience: That is old news! And old lies!

Larry the Litigator: What if Cary G is wrong about keeping people from taking vaccines? What did he say during the interview?

RAWSEP Audience: Spoiler alert. He said he would listen if anyone ended up dying if they do not take vaccines. But then paraphrasing again he said that listening would not happen because you know 67 and he listed many of his previous points not based on science! Doctor Pollyanna: A paraphrase of how I was quoted in this Cary G interview in the journal. If the Bacteria and the Virus do their work and people pay the price. People may learn at their peril that they should have taken vaccines!

Larry the Litigator: Enough said. Doctors are on your side RAWSEP Audience! You know their motto is Do no Harm! See the statement put out by an Academy on Pediatrics on December 5, 2025! Goodbye for now RAWSEP Residents and Keep it Clean and take your vaccines and live long and prosper!
