1A Solar subscriptions with solar panels and battery storage [RAWSEP View](#) As a direct result of the first story in an upcoming series by Inside Climate News the Alabama Power utility almost immediately announced a two year rate freeze [Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates a 501C3 nonprofit organization](#) The New York Times Inside Climate News Newsletter December 9 2025 Three Big Stories of 2025 When we began reporting in January we did not know these would come sharply into focus developments that are turning back the clock on climate progress damaging the environment and harming human health 1 The Trump wholesale dismantling of environmental protection in America Trump 2 point 0 From his first days in office President Donald Trump set out to unleash fossil fuel extraction retreat from clean energy development halt investment in environmental justice and slash the budgets of government agencies responsible for environmental regulation and monitoring Our entire newsroom mobilized to track the policy rollbacks the data erasures the staffing cuts and the funding claw backs We have also launched an investigation into Alabama Power whose electric rates are among the highest in the nation A rare bright spot for US solar subscriptions The Trump administration has spent much of the year dismantling federal climate policy and attacking the clean power industry As a result the growth of renewable energy like wind and solar power has slowed across the United States Installations of solar wind and batteries grew this year but at the slowest rate in more than a decade Solar installations rose just about 10 percent and wind installations have essentially stagnated Some 28 billion dollars in clean energy projects have been delayed or canceled this year But there is at least one American renewable energy company that has found a way to buck this trend Sunrun The San Francisco based company has carved out a niche in a struggling industry with an innovative business model Instead of selling solar panels direct to consumers it leases them offering energy as a subscription service and significantly lowering upfront costs And at a moment when many clean power companies are under attack from the White House Sunrun is trying to position itself as a partner in President The Trump energy agenda Solar as a service Sunrun came on to the scene in 2007 with an innovative twist on solar energy Rather than selling solar panels and installing them on homes it offered a subscription service Homeowners pay a set fee for the energy generated by the solar panels on their house while Sunrun owns installs and maintains the panels Sunrun makes money through these fees selling energy back to the grid it gives consumers a cut and by taking advantage of tax credits In 2021 Mary Powell took over as chief executive and expanded Instead of just offering solar the company would now offer battery storage too That differentiation proved helpful this year when Republicans worked to dismantle Biden era policies that benefited the clean energy industry As lawmakers hashed out details of the new tax law Powell said she was on Capitol Hill making the case that Sunrun was not just another solar company but rather an energy storage company that could help smooth out demand on the grid That really is what resonated when I was in Washington during the whole budget bill process she said Our political leaders realized that what Sunrun was doing was ensuring that we were actually achieving our goals on American energy independence Critically she added the company does not use imported solar panels from China Her efforts paid off Republicans eliminated the direct consumer tax credit that homeowners could use to offset the cost of installing rooftop solar panels But the Republican law preserved the investment tax credit for solar leases that Sunrun relies on through 2030 and the credit for storage through 2033 giving the company a crucial boost Investors took note Sunrun stock is up 75 percent this year and the company has added roughly 30000 new customers for each of the past two quarters

1B Federal judge finds The Trump halt on wind energy is illegal A federal judge on Monday struck down President The Trump halt on approvals of all wind power projects on federal lands and waters The judge wrote that the Trump sweeping executive order was arbitrary and capricious violating federal law Trump a longtime critic of wind power issued the executive order on his first day back in office in January At the time states like Maryland Massachusetts New Jersey and New York had been planning to build more than a dozen large wind farms in the Atlantic Ocean to meet their renewable energy goals It is unclear whether the Justice Department will appeal the ruling But even if the decision withstands a challenge it could have limited effects according to a research note by

analysts at Clear View Energy Partners a consulting firm That is because the courts typically cannot compel federal agencies to approve new projects and developers may be reluctant to propose new wind projects

2 No data of harm was presented at ACIP Vaccine Meeting **Excerpts edited by RAWSEP for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates a 501C3 nonprofit organization** KFF Health News December 9 2025 In This Edition KFF Health News Original Stories 3 Rural Health Providers Could Be Collateral Damage From 100 thousand dollar Trump Visa Fee 5 ACA Sign Ups Outpacing 2024 Numbers Despite Subsidy Uncertainty Vaccines 6 Hepatitis B Vaccine Rollback Not Based On Data ACIP Panel Member Claims 11 Viewpoints US Europe Vaccine Schedule Comparison Is A Facade Why A Health Care Plan Is not Happening From KFF Health News KFF Health News Original Stories

United Kingdom RAWSEP View Idiot Corner hosts a debate between bullying wood burners and their long
suffering near neighbors What is the conclusion of this dumb fest? This article concludes that
EcoDesign Wood Stoves should continue to be used despite the fact that the writer may not know that the
EcoDesign Wood Stove emits 450 times the PM 2 POINT 5 as natural gas burning and the EcoDesign Wood Stove
emits 2 point 8 times the PM 2 POINT 5 as coal burning Consider that your lifestyle affects others and is in fact
contributes to a death style for near neighbors and also hastens climate change Inhaling wood smoke is not
addictive like inhaling nicotine from cigarettes although the negative effects of inhaling wood smoke are similar to

the negative effects of inhaling cigarette smoke It is easy to quit wood burning because there are no physical effects of withdrawal from a drug like nicotine There is really no more to discuss because time that is wasted in repetitive recitation of true facts and this wish for further discussion is merely a delaying tactic so an offender can continue the useless offensive behavior that is not just rudely offensive but physically offensive and a physical assault on innocent near neighbors Banning wood burning is like banning smoking in a workplace and that is especially apt because many people work from home these days If someone thinks they cannot afford to use clean energy for home heating they are badly mistaken Heat Pumps are being provided with Rebates and Tax Subsidies in many countries in 2025 Heat Pumps double as air conditioners so in this time of Global Warming they are doubly useful all year round Warmth in a cold snap from a wood fire is one sided You become toasted on one side and must rotate near the fire to feel any heat The result is often Toasted Skin Syndrome which is not a pretty sight Any ritual of putting on another log only increases the amount of particulates you will inhale just as any similar ritual foolishly viewed as timeless such as lighting up another cigarette only brings you closer to lung cancer and running out of time to enjoy your life in a clean air environment Viewing a video of a fire crackling and smoke rising can take the place of bringing air pollution into your home and emitting pollution in a heavily vented fireplace or wood stove out into the hyperlocalized atmosphere you share with your near neighbors

You become the center of attention when you burn wood for home heating and not in a good way

It may hurt your feelings to be viewed as a criminal by your near neighbors but the feeling of being subjected to dirty air when the excuse is that it is done for atmosphere or aesthetics makes this invasion of the yards and homes of near neighbors is justly seen as unnecessary at best and the source of illness and early death at the utterly predictable worst case

Excerpts edited for brevity and clarity and relationship to Residents Against Wood Smoke Emission Particulates a 501C3 nonprofit organization From the article headline Do we need tougher restrictions on open fires and wood burning stoves? Silver surfers alongside growing numbers of respiratory complaints Do we need tougher restrictions on open fires and wood burning stoves? Editor December 3 2025 It looks as though Father Christmas may need to rethink his traditional chimney deliveries as open fires and wood burning stoves are expected to come under tighter pollution controls Yesterday the government unveiled its latest environmental proposals outlining new targets to cut both the concentration of PM 2 POINT 5 particles and the exposure of the public to them Under the updated Environmental Improvement Plan the aim is to reduce exposure to these harmful emissions by 30 percent by 2030 compared with 2018 levels For many of us the glow of a real fire is woven into our memories the crackle of logs on a winter evening the comforting warmth during cold snaps and the timeless ritual of putting another log on But recent data published in national newspapers has reignited a fierce debate are open fires and wood burning stoves doing more harm than good? At the same time wood burning stoves have become more popular with more households installing them for ambience energy security or cost saving even when other heating options are available The case FOR tougher restrictions 1 Protecting public health The strongest argument for tighter rules is the clear evidence that wood smoke harms health especially for older people children and those with existing respiratory or heart conditions With modern heating options widely available many say these risks are unnecessary 2 Wood burning is now a leading source of pollution Thanks to cleaner cars and industrial controls domestic burning has become one of the biggest sources of PM 2 POINT 5 pollution in the UK Reducing this source could bring quick meaningful improvements to air quality 3 Current rules simply are not enforced Despite thousands of annual complaints enforcement is minimal Critics argue that without stronger regulation and clearer nationwide standards pollution will remain high and communities will suffer 4 A shift is already happening Government proposals suggest phasing out high emission stoves tightening smoke control areas and encouraging cleaner heating across the country Supporters believe tougher restrictions are the natural next step

United Kingdom As Labor plots to crackdown on wood burning stoves under new air pollution plans how Daily Mail Despite the fact that they cost around 3000 pounds to buy and install 1 point 9 million people in Britain now have a wood burning stove in their homes United Kingdom Winter pollution explained Know about PM 2 POINT 5 vs PM 10 and how air purifiers help Mint PM 2 POINT 5 is the much finer form tiny enough to stay suspended in the air for longer periods and small enough to enter the deepest parts of the lungs United Kingdom Wood burning stoves could go up in smoke in air pollution crackdown The BMJ It could mean an effective ban on older appliances and in some areas it would not be possible to use a wood burning stove at all PM 2 POINT 5 emissions have PubMed Wood burning stoves could go up in smoke in air pollution crackdown British Medical Journal BMJ December 3 2025

United Kingdom BBC Television Wood burning stoves face new restrictions but a loophole from the Britain smog years is The Conversation In the new plan domestic burning the use of wood to heat homes is recognized as a primary contributor to particulate matter pollution Yahoo News UK Wood burning stoves are booming in the UK a cozy response to high energy prices and cost of living pressures But this comes with a hidden cost
