

I do not want to be topical!

I do not want to be topical!

I want to be somewhere tropical!

As Wisconsin was only last week!

Hold my hand and sing out!

With your voice wring out

Every rasp in mine from lack of heat!

We are warm inside it is true

And I do not rue

Getting the Heat Pump that warms us today!

But there is a Wood Burner nearby

Who contributes to our air like a fly

That we must constantly shoo away!

Our fly swatter is multiple air purifiers

Which we must use to change identifiers

Of PM 2 point five which betray!

The real particle content is too high

We change our reality inside

By purifying out particles all day!

Changing the topic to solar panels

Though held tight with C channels

Wood smoke obscures them today!

Our Heat Pump could be powered by solar

But we revert to the grid grinding our molars

To get heating done like ballet!

Maybe the grid was powered by Clean Wind and Solar

Keeping us warm though the breeze is polar!

But some grids are powered by Industrial Wood Smoke!

Burning wood emits 450 times the PM 2 point 5

Of natural gas and wood smoke pollution will drive

It if wood is stoked for our energy grid!

Crossed fingers that our grid is at least natural gas

And that in Wisconsin it will last

Until replaced by a really clean energy grid!
