If the Sandman was a Jilly Job Extortion

Jilly was a Mob Name from before you were born Son

The job is putting your eyes out with Wood Smoke Sand like grit

The extortion comes from the top from the Dump Syndicate

It starts in Rhode Island which seems an unlikely place

The Pine Barrens Garbage Collection racket sends wood smoke into our air space

The job has been traditional since early sopranos sang

But the job employs masculine actors like an earthy chain gang

Wood burning provides a small, but notable, portion of Rhode Island total energy

Nearby New Jersey Pine Barrens and a fireplace for Tony were tony accessories

Indoor Residential Wood Burning for home heating has significantly increased since the 2 thousands

As bro sites social media and trad wife holiday movies increasingly hound us

Though natural gas dominates there is some electricity generation with biomass including wood

Contributing as a dirty renewable alongside truly clean renewables wind and solar which are good

Wise Guys do not know the exact percentages maybe only the averages

Doing the math only means counting bodies either dead or alive as leverages

PM 2 point 5 inhaled by living bodies is discounted even as body counts mount

The Dump syndicate at the top has the wisdom of Tony and is the fount

And Industrially wood is now a key secondary heating fuel and part of biomass power

Displacing oil and electricity in home heating with a swagger and a manly glower

So wood burning is the trad to pollute a near neighbor supplicant

Although a Danish energy Giant is recently victorious and defiant

Danes were allowed through a court order just last week

Danes who invested 6 point 2 billion dollars can continue to eke

Out development of an offshore wind farm

That is for now mightier than any Soprano arm

The Danish Energy Giant was losing 1 point 4 million dollars per day

As development was halted by Dump syndicate and law court play

The judge ruled there was no rationale

For national security fears of Dumpster Fire pals

But if gutting of clean energy subsidies was not enough

Risk of facing grinding uncertain legal processes is itself a victory for Dumps

In conclusion the final argument is not jive

Wood burning emits 450 times the PM 2 point five

As Natural gas heating and 2 point 8 times as coal burning

And wind and solar contribute to clean air and Wall Street earnings
