The European Code against Cancer 2026 related to Wood Stove PM 2 point 5

Famous Figures weigh in against the polluting wood burning industry

A Forest International Theater Musical featuring A Yank at Brussels, Belgium

And Harp Refrain and the Songbird Chorus

A Yank at Brussels Belgium directs the Forest International Theater audience

“Find each Electric bike under your seats!

Hold them up Vertically please! Vertically!

Clanking Sound! Vertically! Vertically!

Fish Eye Lens Photographer ready your flash!

To you, Forest International Theater Audience! Bikes free! no cash!

See smiles break through the simultaneous translation !

Our scientists at your Ghent University enjoyed the trip!

The US Scientists are staying on at Ghent University 30 miles away

From this Brussels Theater as this Musical lunges on”

Act 1 The Yank at Brussels Belgium repeats “We shall fight the beach fires,

When consisting of wood, and fight the air fed field fires,

Which are no good, and fight on our streets and blocks

When we are near neighbors of inconsiderate and block

And fight against the pollution from the Industrial wood burning

PM 2 point 5 emitted makes industrial a close European relation of

Block Head indoor residential wood burners, need I go on?

Yes, Address European Wood Burning, The European Audience responds

The Yank at Brussels, Belgium protests that I have made the connection

between indoor residential and European Union Wood burning industrial pollution

I have made my European Union inspired point. Let’s move on.

The European Union audience is proud of what has recently happened and relates

The European Union tackled air pollution as government work to cut cancer rates!

Government application can be done in the European Union! Polluters will not skate!

Indoor Residential Wood Burning air pollution not directly addressed

This omission came to the attention of Nearby Neighbors in distress

Until the last paragraph of a news article on this long range subject

Which summed up overall aims of the program not outlined in specifics

The expert group calls for an end to combustion for electricity generation and heating

across the European Union including coal and biomass. The code recommends people take steps to protect themselves from air pollution and to reduce their contribution to the problem.

This includes keeping homes free of smoke by not burning materials such as coal or wood.

Nearby neighbors of indoor residential wood burners see this as contributing to the greater good.

In the new European Code against Cancer phaseout of fossil fuels

In homes. Again there is a cut off of knowledge about the full

Range of air pollution from burning itself. Wood burning emits 4 fifty full

Times the PM 2 point 5 as the natural gas fossil fuel. In addition

Wood burning emits 2 point 8 times the PM 2 point five and Carbon

Dioxide as the solid fossil fuel coal. Yes fossil fuel use is out of control

In industries that could better much better use wind and solar

Yes fossil fuel such as natural gas should be replaced by wind and solar

In homes through electrical grids that extend to all areas rural

And natural gas furnaces although a bridge that is cleaner than wood burning

Should eventually be replaced by totally clean energy Heat Pumps
That work down to 40 degrees below zero and double as air conditioners
But where is the discussion about a method of home heating that is in the hands
Of each individual to change over to cleaner energy namely wood burning
Just do not burn wood to begin with because industrial attempts show that
Carbon Capture does not work although subsidies for Carbon Capture
Are a cash cow for industries up to European Union wood burners as incentives
To continue to burn wood although we know the particulate count is higher
Cutting air pollution should form part of government strategies to reduce cancer rates,
the European Code Against Cancer has recommended. The code previously focused
on advice to help people to reduce the air pollution that they breathed.
But, for the first time since its launch in 1987, it has given clear direction
to governments. A Doctor, from Utrecht University in the Netherlands who on
the expert team that devised the code, said: “Policymakers should aim to meet
the World Health Organization W H O global air quality guidelines for defeat
outdoor air pollution without delay, while also reducing indoor air pollution
and supporting climate goals. The key message is that this needs action
at European Union E U, national and local level.” Cutting air pollution
should form part of government strategies to reduce cancer rates,
the European Code Against Cancer has recommended. The great
code previously focused on advice to help people to reduce the air pollution
that they breathe. But, for the first time since its launch in 1987, it has given
clear direction to governments. Tobacco smoking is the leading cause of lung cancer

but, across Europe, 28 thousand cases a year can also be attributed to particular
pollution. It is estimated that lung cancer deaths would be reduced by more than
ten percent by meeting W H O guidelines for air pollution. There is increasing evidence
that air pollution is associated with bladder, kidney and brain cancers and that
air pollution can affect survival rates. With home woodburning at increasing rates,
the code calls on governments to discourage and phase out solid fuels for heating,
cooking and recreation. It also calls for home energy system installation incentivizing
which does not pollute, such as heat pumps, solar power and geothermal energy.
It is also important to incorporate air quality information easy availability
involve communities in local plans and protect vulnerable groups, for example around
schools and care settings.” Where this is not possible, indoor air filters should be installed.
The expert group calls for an end to combustion for electricity generation and heating
across the European Union including coal and biomass. The code recommends people take steps to
protect themselves from air pollution and to reduce their contribution to the problem.
This includes keeping homes free of smoke by not burning materials such as coal or wood.
Nearby neighbors of indoor residential wood burners see this as contributing to the greater good.

Act 2 The European Union Subsidies are not yet subsidizing!

Yes, there are protest songs against wood burning industrial power. One outside
example are songs in German titled “Hot is not Cool” in German “Heiss ist nicht cool”
which repeats What will you do then? When? When the Earth gets hot, then what will you do?
and “Do not cut down the forests” in German “Rodet nicht die Walder” amid smoke
What could a Yank at Brussels, Belgium sing in translation about wood smoke
Invoking the health effects of PM 2 point 5 but only the injection of Carbon Dioxide
Into the air and the depletion of forests which ignores that death abides

When lungs are infiltrated with PM 2 point five from wood burning
Whether it is from industrial or indoor residential wood burning
I give you the fragments of information that are building blocks of a song
Biomass is not sustainable, environmentally and financially in action.
Carbon dioxide is emitted during the logging, drying, and pelletizing
of wood, and again at the UK smokestack when the pellets are burning
biomass power plants emit more greenhouse gas than coal.
The Yank at Brussels, Belgium interjects that wood burning emissions are in full
2 point 8 times the PM 2 point 5 plus Carbon Dioxide as coal.
Note the inclusion by me, A Yank at Brussels, Belgium, of the pollutant PM 2 point 5
Not emphasizing Carbon Dioxide, but because PM 2 point 5 is not a greenhouse gas
PM 2 point 5 is generally ignored even by protestors sometimes to their loss
On an issue that affects them existentially since PM 2 point 5 is the perfect
Size to infiltrate the human lung setting off a cascade of early deaths
From health problems such as cancer, heart attacks and asthma attacks
To pivot to the point of view of protestors. Look! I found the lyrics to

Act 3 European Union! Okay, The Yank at Brussels, Belgium could not find the lyrics
To all the lyrics against wood burning In Brussels where the European Union is based,
Wood Burning in the European Union receives subsidies.
This is because biomass is labeled as renewable energy in the European Union
A Yank at Brussels, Belgium improvises! A ton of industrial wood pellets a gift from
the US to the European Union are dumped on the stage and the German lyrics are sung
next to them is a wood stove which is also a dummy without a center
into the wood stove to dump pellets and no dummy to light a match either!
The crowd gasps! The Yank at Brussels, Belgium, makes a solemn mock bow down
The audacity to compare a wood stove to European Union legislation! Some laughs, some frowns!
The Tobacco lobby in the audience who smuggled themselves in
Next to the Wood Stove lobby in the audience next to them
And the Wood Burning Industry Executive Lobbyists puffing on their expensive cigars
Which like European Union industry wood burning emissions are not low tar
Are the loudest gaspers because the lobbyists also partake
And inhale the cig and wood smoke the most of all and wake
To the idea that they may soon attend each others' wakes
Since they are closest to the cig and wood smoke awake
When their indoor residential wood stoves function
Although with efficient venting the smoke like supreme unction
Is given to near neighbors of wood burners combustion
At their early deaths from lung cancer, heart attacks and asthma attacks
Those obvious lobbyist are shown the door, when the audience reacts
"We will fight the beach fires and fight wood fires on our blocks!
Now we will get European Union government handouts to industrial wood burning could end
As well as European Union government handouts for ineffective Carbon Capture could end
We need free stuff because wood burning power raises the price of our electricity!
We still need to educate that ancient forests are nice but young trees also emit!
"Sustainable" sources mean the government thinks young trees are better to burn
Than ancient ones but both old and young trees emit the same PM 2 point 5
"Now we will get the European Union governments to subsidize Heat Pumps! Thanks for the free bikes!"
