

Webisode 57DHYAFZZFLHPB March 20 2026 The first cousins of a lie retire

The first cousins of a lie retire  
Because Dairy State redistricting  
Scares state first cousins of a lie  
Heads of senate and assembly  
Those top two in the state gov  
Are retiring reacting to the above  
Government fuel heightening errors  
Or is it state health crisis triggers?  
Is it for personal reasons unrelated by  
a party recognized as cousins of a lie?  
The Federal government has wasted  
Billions on a war with supplies devastated  
Middle East burning of fossil supplies  
Loss leaders as Mid-West Gas arises  
the Dairy State is located in the middle  
between Federal War and a muddle  
of lies originating federally trickling  
down to state level profoundly icky  
involving Epstein and personal files  
The War created to avoid personal crisis  
Federal War started to grab fossil fuel  
Another country said nuclear threat ruled  
Begin bombing fossil supplies to take out  
Dirty Energy without clean wind to replace out  
Gaps in clean energy to supply heat in winter  
In the Dairy State warmth is a Dem winner  
End the Federal war through negotiation  
Is that possible for the Federal Nation?  
The Federal Plan seems a demand for 2 Billion  
Per day for the everlasting future more Billions  
The figure is around 200 billion now  
50 billion was yesterday! Holy Cow!  
A mix of health care costs added to gas costs  
Dairy State Midwesterners think money is hot  
Too hot to handle for the Rep politicians  
This party will lack two necessary magicians  
Pulling a lie out of a hat does not work now  
Developing clean energy in the land of the cow  
Could be a clean and workable solution  
Time for Wind and Solar energy evolution  
Could cows graze under a panel's shade  
Gathering solar power and wind to aid  
Cold winter home cooking and heating  
Not with gas but clean powered electricity  
This song must not end without mentioning  
That clean energy excludes wood burning  
As we see from pollution from wildfire burning

Of trees both ancient and newly planted  
PM 2 point five emissions even supplanted  
Attention to fossil fuel pollution which resembles  
Wood burning air pollution as it rambles  
Into our airspace traveling hundreds of miles  
Local woodburning also brings no smiles  
To near neighbors of indoor residential wood burners  
Those near neighbors are canaries like coal miners  
Trees also close their pores against nearby wood burning  
Just as humans hold their breath against nearby wood burning  
Photosynthesis cannot occur when tree pores are closed  
Photosynthesis is how carbon into oxygen is transmuted  
Carbon is sequestered by trees only when tree pores are open  
Those burning wood instead of fossil fuel are helplessly hoping  
Wood is renewable! But old trees pollute like young ones too  
When living trees close their pores they also absorb less CO2  
Humans hold their breath against PM 2 point five near wood burning  
Also trees absorb no PM 2 point 5 nor CO2 near wood burning  
Stop Dairy State use of all solid fuel burning  
For industrial plants as well as home heating  
Stop indoor residential wood burning  
4 hundred 50 times the PM 2 point 5 emissions  
from Wood burning as from natural gas emissions  
2 point 8 times the PM 2 point 5 emissions  
from Wood burning as from coal emissions  
If we have lost natural gas supplies in this war  
Even if the Federal Government dropped the bar  
On Russians selling their polluting natural gas  
Making funds for bombs on Ukraine increase  
Because the Federal Government is dropping  
Russian impediments to selling options  
Dropping Sanctions on Iran during the War itself  
In pursuit of Federal or personal power and pelf  
The mechanics! Iranian oil already loaded  
Onto tankers has been effectively stranded  
“on the water” floating storage or discounted  
due to long-standing United States sanctions.  
Now the Feds have lifted sanctions temporarily  
The meaning of waging war is veering crazily  
Reflecting the thoughts that led to chaos  
Stay tuned to see how this works out for us
