The Great and the Good: a drama reaches high C!
The United Nations on Climate Change, with you, meets!
Your oxygen saturation hits a new low and your heart rates
Are above one fifty while you are in the United Arab Emirates!
You first check the Carbon Heights in your hotel room before
You turn on multiple air purifiers and begin to bore
Your roommates about indoor residential wood burning humans
Near neighbors who prevail back home by injecting Carbon
Particulate matter into the air when their appliances are on
Manually shoveling logs into the latest version of wood stoves
Instead of simply smoke cigarettes infused with cloves!
Clove cigarette pollution can largely remain in their lungs
And not in ours if they work from home instead of in offices
Where their clove cigarettes are now ejected off the premises

The neighbors have Great Rooms with high ceilings
The problem is that one wall is decorated with stoning
From river bottoms of variegated colors but eventually
Even if stones and mortar are slapped on artistically
Stained with wood smoke trails and cracked from exposure
To the burning temperatures that also melt their enclosures
But the Great attain their homey vibe and traditional
Look of "Here we are in the midst of nature primeval"
The Good risk looking both smug and over emotional
Tears raining down their faces only from the smoke veil
Enclosing their eye sockets and causing lacrimony
They did not sign up for wood smoke matrimony
When they with trepidation bought their first and only
Home in a starter block that required less money
Because it was the smallest house on the block
Little did they know that their small home clocked
Formerly only housing only renters down on their luck
For over fifty years the original owners losing their pluck
And bravery in facing a wood burning neighbor
Back from Vietnam in 1968 and having a hanker
For mini explosions within a wood stove
Replacing routine excursions in Can Tho
There was hope! The Marine became a retiree!
And sold the house to a putative river keeper
We learned river keepers can turn into polluters
When a Health Secretary turned vaccine denier
Came into office last year and polluted MAGA
Into believing an extraordinary Saga
Of health officials instead of healing
Inflicting side effects that left Mothers reeling
With autism pointed to with no facts substantial
With no scientific proof he said caused by Tylenol

Back to the small block of the Great and the Good
The Great lord it over the Good in the rest of the neighborhood
Like a certain Attorney General knowledgeable about rights
To remain silent in the face of lack of oversight
Of covert wood burning in plain sight
We see you and breathe you! That's right!
We breathe your wood smoke
And although we are often broke
Our spirits are not broken in the face of pollution
We are not Great in money but we offer solutions
To the high C of high Carbon Dioxide
Which even the U N recognizes as a greenhouse gas
But chooses to ignore in the case of renewables
into which wood burning is designated in an act ignoble
Because wood burning is not a clean renewable
The truly clean renewables of wind and solar
Do not emit PM particulate matter that affects the polar
Do not emit the previously mentioned carbon dioxide
That is recognized as a greenhouse gas and on a glide
Path to be either dealt with by the US or ignored
If climate change itself no longer strikes a chord

Here the mournful chorus strikes up the band
You know the words and can recite offhand
Wood burning emits 4 hundred 50 times the PM 2 point 5
Of natural gas burning in industries or homes or dives
Wood burning emits 2 point 8 times the PM 2 point 5
Of coal burning in same industries or homes or dives
Your Great House is merely a dive to the bottom
If wood burning is employed to play the Great Lotto
Of exchanging your ticket to War Explosion like Smoke
For the Great gamble of avoiding utility payments broke
When the logistics of collecting or buying wood trucked in
Put your bottom line in danger of paying for cargo tinged
With smoke causing Lung Cancer requiring weight lifting labor
Smoke that if efficiently vented can reach your neighbors
Who require costly health interventions and early funerals
Not calculated in your pretense of saving money numerals
Your neighbors consulted with the delegate to the Emirates
Who endured Sandstorms in the capital of Dubai of late
Sandstorms are particulates of a larger circumference
PM 10 compared to the PM 2 point 5 of wood burning eminence
Both increasing sandstorms and wildfires are caused by
Climate Change. Wildfires can be accused of increasing PM 2 point 5
But only when the wildfire smoke reaches urban areas full of alive
Humans do those humans employing PM 2 point 5 monitors jibe
Their resident owned PM 2 point 5 monitor wildfire readings
with readings from omnipresent indoor residential wood burning

But the general public who do not yet endure the high C readings
On a regular basis like near neighbors of indoor residential burnings!
But wildfire wood burning smoke that invaded dramatically in 2023
Can serve as an education to those who have no idea in 2026! We
Who are near neighbors of indoor residential wood burners
Want the legislators who went to the United Arab Emirates in 2023
To know that we are waiting in hyperlocalized areas to breathe
Freely and breathe fresh clean air deploy facts not sheathed
In programs to plant trees instead of directing stopping
Indoor residential wood burning and not chopping
Down forests and then replacing them only with replanting.
Planting trees is nice but leaves us humans panting.
A living tree does not convert PM 2 point 5 to oxygen! This
Is not a definition of photosynthesis!
A living tree closes its pores in the face of nearby wood burner
That was proven by a research study in 2024!
A living tree closes its pores when encountering PM 2 point 5
Hyperlocally! When a tree closes its pores it performs alive
No or dramatically less photosynthesis extracting Carbon
Dioxide from the air and replacing it with Oxygen.
As said before a Living Tree does not absorb PM 2 point 5 from the air essence
A Living Tree resists like a human holds his or her breath in the presence
Of PM 2 point five from indoor residential wood burning. A tree has sense
And a human has sense memory and remembers where the smoke came from
A human near neighbor therefore wants respite from this conundrum
The right of the Great in their Great Rooms mired in the Cave Man Dream
Versus the Good whose only moral authority is the right to breathe.
