

Double Feature A Swamp Thing and a Wood Burning Fireplace

A Collection of Rocks Sound Familiar? A Rocky horror double feature!

Picture that show! Instead of a polluting fireplace and a Swamp Evaporator which only moves the temperature down a few degrees, a Heat Pump would

make more sense. A collection of rocks recall the line from the film

“So, come up with your yellow Lab, and see what's on the slab!

I see you shiver with evaporation! But maybe the evaporator is not really to blame.

For the coolness is lame. I will remove the lukewarm evaporator and replace it with a Heat Pump.

As for the breathlessness you feel when near or nearby to the fireplace

I would remove the cause, a PM 2 point 5 fireplace. Then that will remove the symptoms!”

Midwest geologists, newcomers to New Mexico with a dog had to buy a house fast after job transfers

Unfortunately they chose to buy one without a Heat Pump so they settled for

A fireplace for ineffective warmth and an Evaporative Cooler also called a Swamp Evaporative Cooler

What they did not fully understand was that a Swamp Evaporator

Only brings down the heat a few degrees, so is not very helpful in New Mexico.

Not burning wood would be a more considerate and neighborly gesture.

For an Evaporator to work you have to have open windows and doors

During Air Quality Alerts open windows and doors only let in dirty air

A Heat Pump requires closed windows and doors and air purifiers

Which are lifesavers, during a New Mexico Air Quality Alert, not Air Coolers!
