

Web 57DHYAFZZFLYG July 12 2026 Wind Power is, and what should not ever be

Wind Power is, and what should not ever be

What is, is a movement toward wind power

What should not ever be is buying off wind turbine companies

So that they will not be competition to American oil companies

What is, is that the current administration is using American

Tax dollars to get wind turbine companies to cease American

Projects for offshore wind farms with a loss of clean American

Energy and loss to the health of Americans and hastening

Climate change. While most of the rest of the world is heeding

The evidence of climate change the current administration

Is using this precious and fraught time to supposedly line

the pockets of the fossil fuel industry while at the same time

starting a war that has resulted in a block of fossil fuels to the world

that is short sighted and blind to the harm to all people from pollution

which may help fossil fuel industry which has wells in the United States

but since Wind and Solar are now much cheaper than gas and oil the stakes

and the gambling is not on the side of the current administration.

What they win short term in the long term harms our nation.

This is reminiscent of the short term view of indoor residential wood burners

Some fascination with looking at fire does not balance out harm to others.
