The Common Man or Woman is treated unfairly concerning Wood Smoke
The Middling Man or Middling Woman in Ben Franklin's Time had no Wood Smoke Choice. Ben Franklin attempted to invent what is known as the Franklin Stove
In addition to promoting electricity, notably by flying a kite with a key above Him in the sky during a electricity producing rainstorm. The Franklin Stove
Is one of his few mistakes. At the time wood burning stoves were even more highly Polluting than those who choose to burn wood experience or inflict on others today.
The idea of the Franklin Stove was to shunt wood smoke through an elaborate sequence Of pipes that were meant to provide more clean venting of the smoke at the end of the sequence Possibly resembling more a winner of the Ig Nobel Prize, an award given out for pseudo Nobel Level scientific research including elaborate, funny, or unusual inventions. While the Ig Nobels are satirical, they highlight research that can inspire creativity, spark public interest in science, and sometimes lead to real-world applications. However, futile tinkering with wood stoves is wrong today. There are cheaper, clean alternatives to always highly polluting wood stoves
Invention should focus on clean energy like win power, solar power and geothermal power Which run on the electricity that Ben Franklin worked so hard to promote with all his powers.
Clean energy can achieve the same service for man of heating homes and heating food imbibed.
Heat Pumps can heat homes cleanly and also serve as air conditioners in these global warming times.
Carbon capture does not work after decades of funding for Carbon Capture projects recently
Just do not burn wood to begin with. Wood burning emits Two point eight times the PM Two point Five As the Fossil Fuel Coal Burning. And Wood burning emits Four Hundred fifty times The PM Two Point Five as the fossil Fuel natural gas burning. Win solar and geothermal power without pollution
Was not developed in the time of Ben Franklin. Franklin attempted to modify intractable pollution
Just do not burn wood to begin with. That is the kind of practical solution that Franklin would stoke.
We are lucky in Two Thousand Twenty Six to have many alternatives to pollution from wood smoke.
