Web 57DHYAFZZFLZKA August 9 2026 Current Admin Win payoff to Germany to stop Win clean energy

A current Admin Win payoff to Germany to stop a Win clean energy project
A walk of shame for a normal person is paradoxically a win, for the fat
Old man who now clutching cash and wearing a wig in his latest gambit,
still alluring to a short sighted segment of the American people
Who he publicly declared his love for, saying “I love stupid people”
The current leader caught in bed with Fossil Fuel companies is old hat
What is new is the amount the American people pay for that
The relationship is not just personal between the old man and fossil fuels
An exchange of endearments and sending the U S backward by passing rules
That place fossil fuels at the top of subsidies delivered by the Fed Admin
Billions of dollars are being spent in exchange for abandoning Win
Farms. Turbines stand in the ocean and produce clean energy under
Normal operating conditions, replacing dirty fossil fuel production over
And done with, in the minds of rational planners for the future of our planet
The current admin will pay a German Firm One point Two Billion Dollars for it
To drop an offshore Win project. This was the fifth such deal, made on August Eighth
Two Thousand Twenty Six. The deal on Wednesday follows agreements to refund Win
Leases off California, Maine, New Jersey, New York and North Carolina for Win.
The current Admin will pay the German energy firm R W E One point Twenty Two Billion
Dollars to abandon plans to build Win farms off the coasts of New York, California and
Louisiana, the German R W E company subsequently announced on Thursday.
Total payouts in the first year of the current admin are over Three point Nine billion dollars today
It was the fifth such deal the government has reached this year to halt the development made
of offshore Win, a source of renewable energy that the president personally derided for decades.
Under the agreement, R W E will voluntarily surrender three leases it owned with a Win farm chance
in federal waters. Those projects were in the early stages of development and had little chance
of moving forward under the current Admin , which has halted all federal permits
for offshore Win. The government would reimburse R W E roughly what the company admits
it paid for the leases under the Biden Admin. R W E will invest about the same amount
in new natural gas projects in the United States, R W E said. The decision? Short Term economic!
R W E emphasized the company will invest about the same amount in known pollution
with new natural gas projects in the United States, R W E said. After careful consideration,
it was determined there is no path forward to permit these projects in the United States nation
for the foreseeable future, R W E said in a statement, referring to the offshore Win leases.
The company determined that this resolution serves best R W E stakeholder interests
and allows it to direct resources toward energy projects that can be advanced with certainty.
The firm R W E will spend Nine Hundred Million Dollars to acquire an indirect Sixteen
percent stake in a liquefied natural gas project in Louisiana and sign a Three Hundred Million
Dollar order for new gas turbines that generate electricity. The company said it was planning
to build at least Fifteen natural gas peaking plants in the United States. The agreement

is similar to deals that the current Admin has struck since March with other energy developers, including TotalEnergies and Invenergy, to refund Win leases off California, Maine, New Jersey, New York and North Carolina in exchange for investing in fossil fuel projects instead. Including Thursday's announcement, the government has so far spent in all Three point Nine Billion Dollars to get companies to end Twelve offshore Win leases. After assessing the deal, Democrats denounced the deal observing that American costs are sky-high for energy, and the current Admin answer is to spend almost Four Billion Dollars of taxpayer money killing twelve offshore Win power leases provided For unlimited clean energy once online. The minority leader of the U S Senate issued a response was that Win power generates far fewer planet-warming emissions than burning fossil fuels, and many states had been developing offshore Win farms to help meet their goals for tackling climate change. Yet the leader of the current Admin has called the technology ugly and costly and has sought to block new Win turbines. In Two Thousand Twenty Five, the Interior Department ordered work to stop on five Win farms already under construction off the East Coast. Federal judges struck down all of those moves. The Pentagon concerning Win farms on land has also stalled approvals

The agreements with companies to forfeit their offshore leases are a new strategy for The current government to turn to after losing court cases over the stop-work orders. The deals are a highly unusual use of taxpayer dollars. Seven Democratic-controlled states, including New York sued the current admin over the Interior Department's deal with TotalEnergies. California has also sent a notice of intent to sue over a deal the current Admin struck to cancel a Win farm off the state's Central Coast. R W E is one of the world's largest renewable energy developers, and it currently has Eighteen offshore Win farms in operation, mainly in Europe, with more under construction. Shortly after the leader of the current Admin won the Two Thousand Twenty Four election, the R W E chief executive said he was placing plans to expand offshore Win development in the United States on hold. The R W E United States subsidiary, R W E Americas, works in development of onshore wind, solar power, and batteries in the United States, as well as some gas power, all forms of clean power. Buying off Clean Energy to stymie future competition with fossil fuel power. Eliminating clean energy in the United States clears the path for dirty fossil fuels to continue How short sighted to wish to reap short term benefits for fossil fuels at the expense of our planet venue.
