Our Eleventh Hour Concert is led by October Cats
A phenomenon sweeping the Nation is videos of Cats
We see Cats in our homes knocking off China by edging
It off kitchen shelves. I remember catching China edging
then free falling off a shelf in California with no equanimity
A successful fluke catch during that earthquake eventually
Was only one dramatic calamity that I forestalled
Without a catcher's mitt but caught barehanded.
Now I have a cat and it did not edge objects off for fun
Until it's late twos which in human years is the teens
The attention from groups of humans when edging
Seemed to urge this cat on to destruction not hedging
Behavior even when human noise was ambiguous or even negative
Cats are mysterious. This cat liked the attention and saw love
In the yelling and milling around at least until it was explained
In sweetly pitched soothing logical tones until the Cat purred
That chaos ensued and the container for her sustenance
Lost its utility when the China dish shattered in pieces.
Will the Cat continue to edge China off shelves in the future?
A residential door to door program of advisement is the cure!
In Wisconsin this October candidates who counter Chaos
Are represented by an ER Nurse who chose public service
Another who hopes to ban fossil fuels which fatten the rich purse
Of corporations who want no competition from clean energy most
Dramatically possible on the human scale to personal residences
By passing a Wisconsin law for Balcony A K A Plug In Solar for residences
To control how their energy is collected. At the same time lower their bills.
Clean energy in the form of Wind has leapt to the top in lowering bills.
A thoughtless wrongful push from one side off to the abyss needs our help
Counter with education about what is lost when Safety Guardrails are leapt
One November candidate in Wisconsin also advises use of Agrivoltaics in farming
Combining wind turbines which take little earth space with conventional farming.
So our Eleventh Hour October Eleventh Day before the Twelfth of Heaven
In the Sugar Castle in Wisconsin will feature a concert of cats Leavened
With human written songs that try to mine the cuteness of cat videos
Along with approximation of what we think is on the minds of these furious
And fast as well as turbulent and unherdable cats although heard sometimes
How can we take a poll of cat opinion when they don't answer the door and glide
Off into infatuation with edging objects off shelves and abandoning logic
Will they vote again against their own interests leaving some surroundings in chaos?
But cats are smart although they cannot be herded. Just let them know they are heard
And point out that basics like food and shelter are surely worth it! Their room and board!
Affordability may not occur to cats until it becomes obvious that even rats
Are not enough to sustain their nine lives and the lives of future cats!
We took suggestions from the audience and are proud to proclaim
The winning song has "Cat Solar and Wind are Wild!" as the refrain!
Does indoor residential wood burning as well as fossil fuel and other solid fuel burning

Leave your air polluted and your wallet thinner? Get off the fence and stop yowling
With Balcony Solar A K A Plug in Solar you are given agency and money back
Sing along, “Cat Wind and Solar are Wild!” Stop being labeled corporate hacks!
